

Please open my assignment in google chrome, thanks!

## ASSIGNMENT TWO

Comp30680

This assignment contains three requirements , and it consists of html, javascript, json, css. I use inline style to write css.

### **functions of javascript:**

*push()*: The push() method adds one or more elements to the end of an array and returns the new length of the array. I used it when I was trying to push all the countries in JSON.

*typeof born == "undefined"*: I use it when I judge if the additional information has value, if has , it would be output.

*The console.log()* Method: Searching for (and fixing) errors in programming code is called code debugging. I used it when some function cannot show .
